

You be the Scientist

Come and explore the invisible world around you. We'll learn about amazing biology that is so small our eyes cannot see it! You will be a scientific investigator as you learn how to uncover hidden mysteries about biology using fun, hands-on experiments and activities. We will also engage in the world of geology. Learn the difference between rocks and minerals and tricks for telling minerals apart. Come handle rocks from around the country and discover how they were made. Plus make your own edible rock cycle. You will also have the opportunity to talk to young women with science careers.
